AB - JP2003306568 NOVELTY - Polyolefin type resin composition contains (in weight parts (wt.pts)) (a) ethylene- alpha -olefin copolymers (100-70) obtained using metallocene catalyst, (b) olefin-type elastomers (0-30), and (c) wood meal (5-70) having average particle diameter of 200-10000, foaming agent (0.5-10) and antioxidant (0.1-10). The amount of (c) component is calculated with respect to 100 wt.pts of total amount of (a) and (b) components.

- DETAILED DESCRIPTION - Polyolefin type resin composition contains (in weight parts (wt.pts)) (a) ethylene- alpha -olefin copolymers (100-70), (b) olefin-type elastomers (0-30), and (c) wood meal having average particle diameter of 200-10000, foaming agent (0.5-10) and antioxidant (0.1-10). 5-70 wt.pts of (c) component is contained with respect to 100 wt.pts of total amount of (a) and (b) components. The (a) component, which is a copolymer of ethylene and 3-12C alpha -olefin is polymerized and obtained by using metallocene catalyst. The (a) component has density of 0.86-0.92 g/cm<sup>3</sup>, melt flow rate of 0.5-40 g/10 minute and ratio (Mw/Mn) of weight average molecular weight (Mw) and number average molecular weight (Mn) of 1.5-5. INDEPENDENT CLAIMS are also included for the following:

- (1) foaming sheet;
- (2) laminated object; and
- (3) notice-plate surface material containing the laminated object.
- USE - In foaming sheet for laminated object of notice-plate surface material (claimed). The foaming sheet is also used as interior material of building.
- ADVANTAGE - The molded product has excellent surface property (i.e. non-sticky surface property and traces of pin hole are not conspicuous), mold-ability and excellent physical properties (e.g. tension and design properties) during molding process.
